NVIDEA CEO CASE

4-Layer Behavioral Diffusion Analysis: Dual-Model Archetype Framing, Weighted Meso Propagation, Modified Bass Macro Dynamics, and Bounded Iterative Feedback

EXECUTION STATUS: COMPLETED | Valid Archetype Slots: 30/30

Input Signal Studied
On November 10–11, 2026, reports emerged concerning NVIDIA CEO Jensen Huang and an alleged connection between a woman he had an affair with and Chinese intelligence.

According to Associated Press reporting, President Donald Trump said the FBI was looking into the matter. Huang acknowledged the affair and issued an apology to his wife and NVIDIA. The Associated Press also reported that The New York Times had cited US intelligence assessments alleging that the woman was gathering information for Beijing.

The situation has attracted attention because NVIDIA is a strategically important semiconductor company, its advanced AI chips are central to the global AI industry, and US-China technology relations remain sensitive.

Analyze the possible consequences for NVIDIA's corporate reputation, investor confidence, governance, national security scrutiny, employee morale, international business relationships and semiconductor industry sentiment.

IMPORTANT EVIDENCE RULES:

1. Distinguish the acknowledged affair from the separately attributed intelligence allegation.
2. Attribute statements to their actual sources.
3. Do not claim that an allegation is independently proven merely because it has been reported.
4. Do not assume Jensen Huang committed espionage or that NVIDIA transferred confidential technology.
5. Distinguish actual reported developments from hypothetical consequences.
6. Identify what additional evidence would be needed to establish corporate misconduct or national security violations.

Model this as an evolving information event, not as proof of wrongdoing.

Scientific & Methodological Scope Notice
All Micro, Meso, Macro, and Feedback indicators in this document derive strictly from the archived JSON output of simulation `sim_476a7b912c_1794376307`. Model scores represent **synthetic computational estimates** generated by dual language models coupled to deterministic Bass equations, not empirically observed survey or market measurements. No external ground-truth telemetry was fabricated or interpolated.

1. Executive Summary

Event Studied: NVIDEA CEO CASE. This simulation evaluated how five behavioral archetypes interpreted the trigger signal over **3 closed-loop iterations** using dual inference engines (**ollama/qwen3.5:4b** and **ollama/gemma3:4b**).

Principal Quantitative Outcomes: Across the final cycle (Round 3), cumulative simulated adoption reached **13.9%**, while active retained adoption stood at **12.7%** (churn rate c = 0.08). Simultaneously, the attention indicator reached **64.0%**, yielding an attention-to-adoption ratio of **5.03x**. Cross-model alignment was **57.7%** and cross-iteration stance convergence scored **0.0% (diverging_polarizing)**.

Dominant Framing (Final Cycle): A high-profile personal scandal involving NVIDIA's CEO has triggered a federal investigation, with US intelligence alleging espionage ties to the woman involved in the affair.

Summary Limitations
• Macro trajectories reflect synthetic Bass differential dynamics parameterized from network scores rather than observed empirical adoption counts.

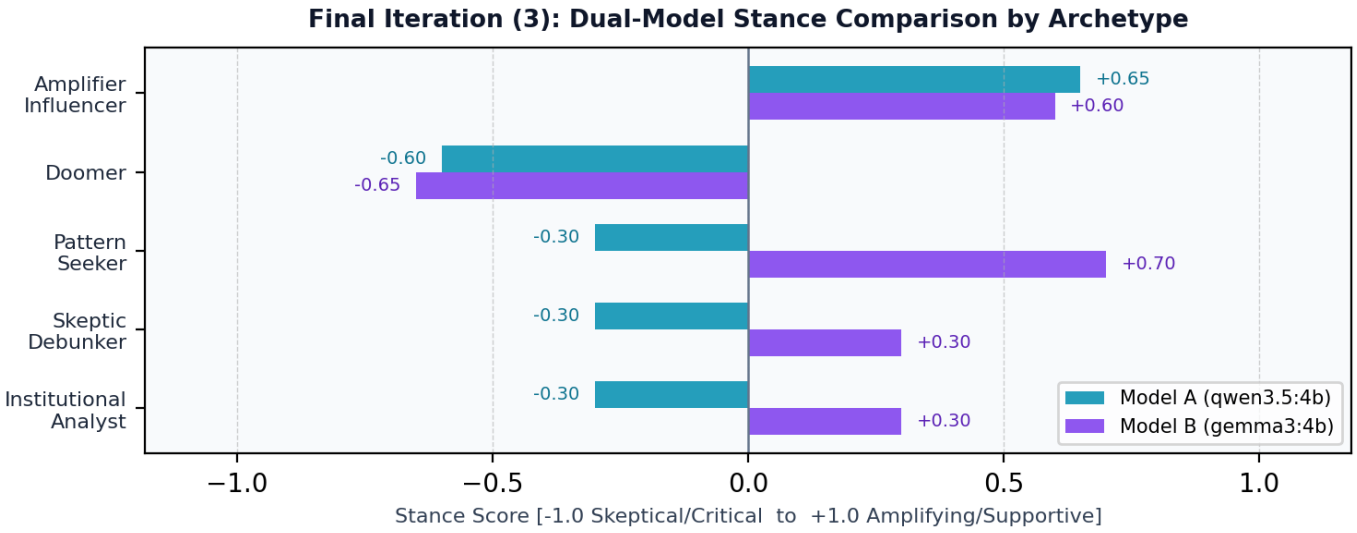

2. Experiment Configuration & Provenance

Parameter	Value	Notes / Provenance
Model A Engine	ollama / qwen3.5:4b	Primary analyst slot (sequential pass 1)
Model B Engine	ollama / gemma3:4b	Independent reviewer slot (sequential pass 2)
Iterations Executed	3 (configured max: 3)	Bounded recursive loop [3..5]
Population Ceiling (M)	1.00	Normalized addressable saturation limit
Churn / Fatigue Rate (c)	0.080	Per-cycle abandonment rate reducing N(t) -> A(t)
External Weight (alpha)	0.40	Convex mix: spread = alpha*E + (1-alpha)*I
Execution Duration	520.19 s	Sequential VRAM guard: True
Hardware GPU Telemetry	NVIDIA GeForce RTX 5070 Laptop GPU	VRAM: 8151.0 MB
Source URL Reference	https://apnews.com/article/272515c4fca92435224406593a892e69	Passed verbatim into Micro prompts

3. Micro Layer: Archetype Interpretations & Cross-Model Alignment

In each round, five behavioral archetypes are queried independently across Model A and Model B (10 slots/round). Interpretations are verified against strict Pydantic JSON schemas, separating source-supported claims from inferences and unsupported speculation.

Agreement Metric	Measured Value	Interpretation
Composite Model Agreement	57.7%	0.70*Stance + 0.30*Semantic Tag Similarity
Matched Valid Archetype Pairs	5 / 5	Requires both Model A and Model B to succeed
Stance Agreement	73.7%	1 - |stance_A - stance_B| / 2 across valid pairs
Stance Pearson Correlation (r)	-0.078	Directional rank consistency across archetypes
Tag & Claim Semantic Similarity	20.5%	Jaccard token overlap of narrative tags & claims

3.1 Final Iteration (Round 3) Dual-Model Outputs

Archetype	Slot / Model	Status & Evidence	Metrics (S / V / Eff.C / E / U)	Primary Narrative & Key Claims
Institutional Analyst	MODEL A qwen3.5:4b	success / inferred	S: -0.30 | V: 0.85 C(eff): 0.40 (LLM: 0.40) Emo: 0.60 | Unc: 0.75	While a personal scandal involving Jensen Huang is confirmed and under federal review, the specific allegation of espionage remains an unverified intelligence assessment rather than independently proven fact. Claims: A federal investigation by the FBI has been initiated regarding allegations of espionage tied to a third party in an affair involving Jensen Huang.; US intelligence assessments have alleged that the woman involved was gathering information for Beijing.
Skeptic Debunker	MODEL A qwen3.5:4b	success / inferred	S: -0.30 | V: 0.85 C(eff): 0.60 (LLM: 0.60) Emo: 0.70 | Unc: 0.45	While the personal admission of an affair is a verified fact, the allegation of espionage remains an unverified intelligence assessment cited by media outlets rather than independently confirmed evidence. Claims: A federal investigation by the FBI is actively occurring based on President Trump's statement.; US intelligence has formally assessed that the woman involved in the affair was gathering information for Beijing.

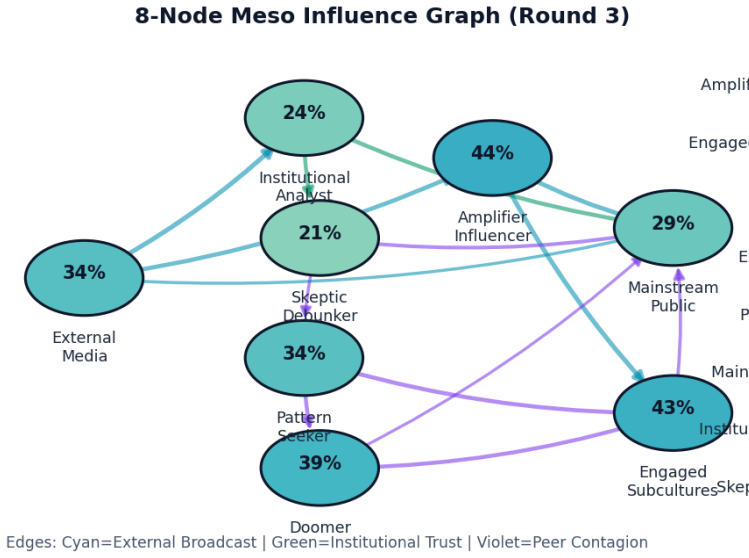

Archetype	Slot / Model	Status & Evidence	Metrics (S / V / Eff.C / E / U)	Primary Narrative & Key Claims
Pattern Seeker	MODEL A qwen3.5:4b	success / supported	S: -0.30 | V: 0.85 C(eff): 0.60 (LLM: 0.60) Emo: 0.70 | Unc: 0.45	A high-profile personal scandal involving NVIDIA's CEO has triggered a federal investigation, with US intelligence alleging espionage ties to the woman involved in the affair. Claims: A federal investigation by the FBI is underway regarding allegations of espionage ties to a woman involved in an affair with Jensen Huang.; US intelligence has assessed that the woman in question may be gathering information for Beijing.
Doomer	MODEL A qwen3.5:4b	success / supported	S: -0.60 | V: 0.85 C(eff): 0.45 (LLM: 0.45) Emo: 0.72 | Unc: 0.75	A high-profile personal scandal involving NVIDIA's CEO has triggered a federal investigation, with US intelligence alleging espionage ties to the woman involved in the affair. Claims: An affair between Jensen Huang and a woman linked to Chinese intelligence is reported as fact by AP.; US intelligence has assessed this woman as gathering information for Beijing (allegation only).
Amplifier Influencer	MODEL A qwen3.5:4b	success / supported	S: +0.65 | V: 0.92 C(eff): 0.78 (LLM: 0.78) Emo: 0.71 | Unc: 0.35	A high-profile personal scandal involving NVIDIA's CEO has triggered a federal investigation, with US intelligence alleging espionage ties to the woman involved in the affair. Claims: Reports confirm Jensen Huang admitted to having an affair with a woman linked to Chinese intelligence.; The FBI is currently investigating this matter under the direction of President Trump.
Institutional Analyst	MODEL B gemma3:4b	success / inferred	S: +0.30 | V: 0.40 C(eff): 0.60 (LLM: 0.60) Emo: 0.40 | Unc: 0.75	Initial reporting indicates a personal matter involving NVIDIA’s CEO, prompting a federal inquiry and subsequent admission of wrongdoing. The situation’s sensitivity regarding US-China technology relations necessitates a cautious approach. Claims: The FBI initiated an investigation at the direction of President Trump.; Jensen Huang admitted to an extramarital affair.
Skeptic Debunker	MODEL B gemma3:4b	success / inferred	S: +0.30 | V: 0.35 C(eff): 0.60 (LLM: 0.60) Emo: 0.40 | Unc: 0.75	Initial reports indicate a personal affair involving NVIDIA’s CEO, prompting a statement from the President and an admission from Huang. The involvement of US intelligence is currently under investigation, representing a sensitive situation given geopolitical tensions. Claims: The FBI initiated an investigation based on a statement from President Trump.; Jensen Huang admitted to an affair.
Pattern Seeker	MODEL B gemma3:4b	success / supported	S: +0.70 | V: 0.30 C(eff): 0.80 (LLM: 0.80) Emo: 0.60 | Unc: 0.60	A reported affair between NVIDIA’s CEO and a woman, coupled with intelligence assessments, has prompted a federal investigation and heightened scrutiny of the company’s operations and relationships. Claims: Jensen Huang acknowledged an affair.; The FBI initiated an investigation at the direction of President Trump.

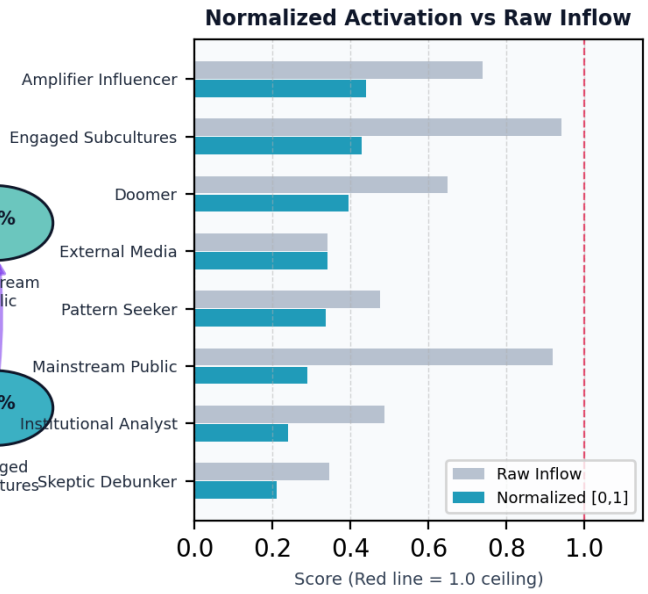

Archetype	Slot / Model	Status & Evidence	Metrics (S / V / Eff.C / E / U)	Primary Narrative & Key Claims
Doomer	MODEL B gemma3:4b	success / inferred	S: -0.65 | V: 0.35 C(eff): 0.60 (LLM: 0.60) Emo: 0.80 | Unc: 0.75	The emergence of this scandal, involving a personal affair and allegations of intelligence involvement, represents a potential vulnerability within a strategically important sector of the global economy, highlighting the inherent risks of interconnected systems and the potential for geopolitical leverage. Claims: The FBI initiated an investigation at the direction of President Trump.; Jensen Huang admitted to an extramarital affair.
Amplifier Influencer	MODEL B gemma3:4b	success / inferred	S: +0.60 | V: 0.75 C(eff): 0.60 (LLM: 0.60) Emo: 0.80 | Unc: 0.75	A sensitive situation involving NVIDIA’s CEO has prompted an FBI investigation and a public apology, highlighting the complex interplay of personal conduct, corporate governance, and US-China relations. Claims: The FBI is investigating the affair, based on a statement from President Trump.; Jensen Huang has admitted to an affair and apologized for it.

4. Meso Layer: Weighted 8-Node Influence Network

Aggregate network pressures in the final round: **External Influence = 41.2%**, **Internal Contagion = 33.2%**, and **Effective Spread Potential = 36.4%**. Activation semantics: instantaneous_per_iteration.

Mathematical Relationship: Node Activation vs Raw Inflow vs Aggregate Scores
1. **Normalized Activation [0.0, 1.0]:** Each node computes instantaneous activation in iteration *t* normalized by outbound/inbound capacity and clamped strictly to [0, 1] so repeated iterations never compound past 100%.
2. **Raw Inbound Inflow:** Preserved separately (unclamped sum of weighted inbound signals *sum(w_ji * T_j)*). Hub nodes like Mainstream Public (edge weight sum > 3.0) or Engaged Subcultures can have raw inflow > 1.0 while normalized activation stays in [0, 1].
3. **External Media Broadcast:** Reflects broadcast amplification from Amplifier Influencer and Institutional Analyst channels into public media.
4. **Aggregate Effective Spread:** Convex blend *alpha * E + (1 - alpha) * I* ensuring zero double-counting between external media pressure and peer contagion.

Node Label	Type	Norm. Activation	Raw Influence	Ext / Int Contrib	Calculation Basis
Institutional Analyst	archetype	24.1%	0.488	0.341 / 0.000	Instantaneous archetype activation: 0.70·IntrinsicTransmission(0.199) + 0.30·NormInboundFeedback(0.341) [Raw inflow=0.488].
Skeptic Debunker	archetype	21.1%	0.345	0.000 / 0.199	Instantaneous archetype activation: 0.70·IntrinsicTransmission(0.216) + 0.30·NormInboundFeedback(0.199) [Raw inflow=0.345].
Pattern Seeker	archetype	33.7%	0.475	0.000 / 0.216	Instantaneous archetype activation: 0.70·IntrinsicTransmission(0.389) + 0.30·NormInboundFeedback(0.216) [Raw inflow=0.475].
Doomer	archetype	39.5%	0.650	0.000 / 0.389	Instantaneous archetype activation: 0.70·IntrinsicTransmission(0.397) + 0.30·NormInboundFeedback(0.389) [Raw inflow=0.650].

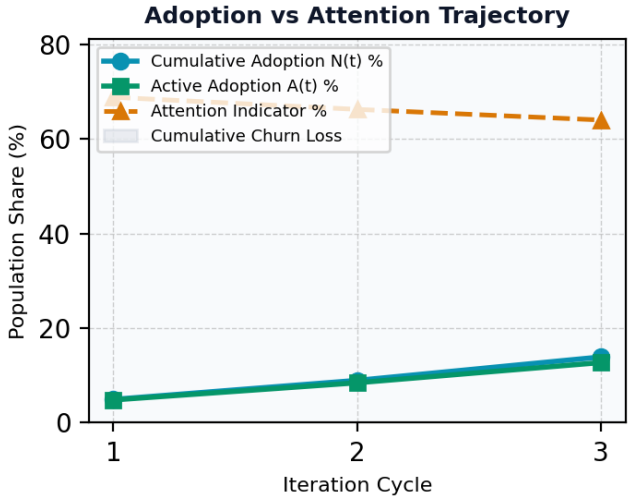

Node Label	Type	Norm. Activation	Raw Influence	Ext / Int Contrib	Calculation Basis
Amplifier Influencer	archetype	44.0%	0.738	0.341 / 0.000	Instantaneous archetype activation: 0.70·IntrinsicTransmission(0.483) + 0.30·NormInboundFeedback(0.341) [Raw inflow=0.738].
Mainstream Public	public segment	29.0%	0.919	0.435 / 0.194	Instantaneous capacity-normalized absorption: 0.40·NormExt(0.435) + 0.60·NormPeer(0.194) [Raw unnormalized inflow=0.919, inbound weight sum=3.25].
Engaged Subcultures	public segment	42.9%	0.940	0.483 / 0.393	Instantaneous capacity-normalized absorption: 0.40·NormExt(0.483) + 0.60·NormPeer(0.393) [Raw unnormalized inflow=0.940, inbound weight sum=2.20].
External Media Broadcast	external channel	34.1%	0.341	0.000 / 0.000	Instantaneous exogenous broadcast activation: 0.5·T(Amplifier) + 0.5·T(Institutional). Bounded in [0.0, 1.0]; has 0 inbound network edges.

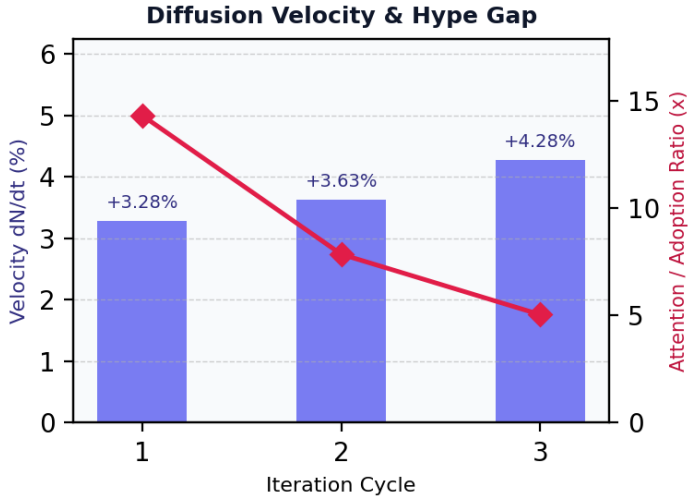

4.1 Directed Influence Edge Weights

Source Node	Target Node	Weight	Channel Type
external_media_broadcast	institutional_analyst	0.85	external broadcast
external_media_broadcast	amplifier_influencer	0.75	external broadcast
external_media_broadcast	mainstream_public	0.40	external broadcast
amplifier_influencer	mainstream_public	0.80	external broadcast
amplifier_influencer	engaged_subcultures	0.85	external broadcast
institutional_analyst	skeptic_debunker	0.65	institutional trust
institutional_analyst	mainstream_public	0.70	institutional trust
skeptic_debunker	mainstream_public	0.55	peer contagion
skeptic_debunker	pattern_seeker	0.40	peer contagion
pattern_seeker	doomer	0.65	peer contagion
pattern_seeker	engaged_subcultures	0.70	peer contagion
doomer	engaged_subcultures	0.65	peer contagion
doomer	mainstream_public	0.35	peer contagion
engaged_subcultures	mainstream_public	0.45	peer contagion

5. Macro Layer: Modified Bass Diffusion & Attention Separation

Meso propagation scores parameterize the discrete Modified Bass diffusion equation with behavioral churn *c*: *dN/dt = (p + q * (N/M)) * (M - N)* and *dA/dt = dN/dt - c * A(t)*, guaranteeing *0 <= A(t) <= N(t) <= M*.

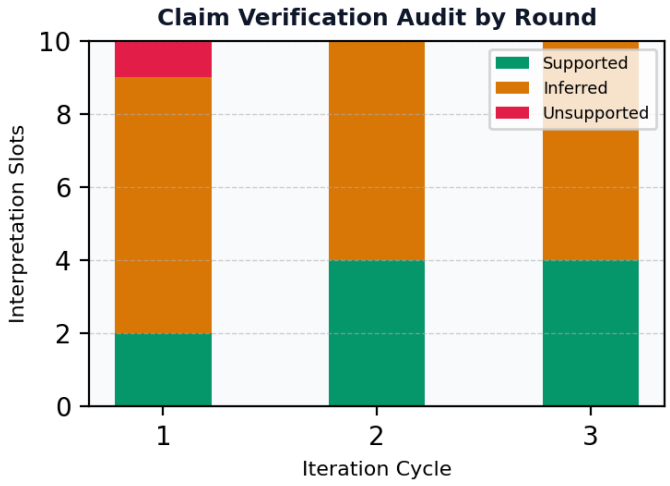

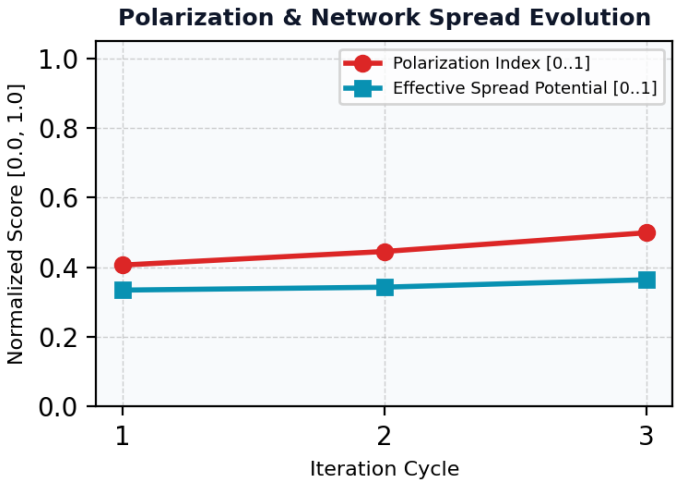

Round	p (Ext)	q (Int)	M / c	Cumul. N(t)	Active A(t)	Vel. dN/dt	Attention	Attn/Adopt
1	0.0307	0.2484	1.00 / 0.08	4.9%	4.8%	+3.28%	68.9%	14.30x
2	0.0295	0.2590	1.00 / 0.08	9.0%	8.5%	+3.63%	66.3%	7.84x
3	0.0306	0.2663	1.00 / 0.08	13.9%	12.7%	+4.28%	64.0%	5.03x

Attention vs. Adoption Distinction
Attention Indicator captures transient discourse visibility and emotional virality, which frequently spikes early (Attention/Adoption Ratio > 1.0x). **Active Adoption A(t)** measures net sustained behavioral commitment after churn *c* decays unconvinced or fatigued cohorts relative to cumulative ever-exposed adoption *N(t)*.

6. Feedback Layer: Iteration-by-Iteration Evolution

Round	Polarization	Claim Audit (S/I/U/F)	Amp. Warn	Cycle Delta & Dominant Framing Summary
1	0.406	2 / 7 / 1 / 0	YES	Baseline Iteration 1: Evaluated 10 valid interpretations directly from raw source signal (active adoption 4.8%, attention 68.9%, polarization 0.41). — Dominant: A high-profile personal scandal involving a tech titan has triggered a federal investigation and raised serious questions about national security risks in the US-China semiconductor rivalry.
2	0.445	4 / 6 / 0 / 0	No	Iteration 2 vs Iteration 1: Mean stance shifted -0.120, credibility +0.095, uncertainty +0.020, active adoption +3.6%, attention -2.6%. Change driven by injected Round 1 macro consensus, claim audit, and Bass imitation/churn integration. — Dominant: A high-profile personal scandal involving NVIDIA's CEO has triggered a federal investigation, with US intelligence alleging espionage ties to the woman involved in the affair.
3	0.499	4 / 6 / 0 / 0	No	Iteration 3 vs Iteration 2: Mean stance shifted -0.105, credibility -0.042, uncertainty -0.015, active adoption +4.3%, attention -2.2%. Change driven by injected Round 2 macro consensus, claim audit, and Bass imitation/churn integration. — Dominant: A high-profile personal scandal involving NVIDIA's CEO has triggered a federal investigation, with US intelligence alleging espionage ties to the woman involved in the affair.

7. Cross-Layer Causal Analysis

1. Micro -> Meso Transmission: In Round 1, valid archetype interpretations produced initial network pressures of External=41.5% and Internal=28.1% (Effective Spread=33.4%). Across iterations, evidence-grounding penalties (0.85x for inferred, 0.40x for unsupported claims) modulated credibility weights into network edges while excluding failed slots.

2. Meso -> Macro Parameterization: Network pressures mapped deterministically into Bass innovation coefficient p (0.0307 -> 0.0306) and imitation coefficient q (0.2484 -> 0.2663), driving cumulative adoption from 4.9% to 13.9% and active adoption from 4.8% to 12.7%.

3. Macro -> Feedback -> Subsequent Micro Rounds: Macro states and verified source evidence anchors fed forward into rounds 2..3, yielding stance variance evolution from 0.1650 to 0.2489 (diverging_polarizing).

8. Key Findings & Possible Consequences (Simulated Hypotheses)

• **Diffusion Trajectory:** Under the configured churn rate (c=0.08), retained active adoption reached 12.7% vs cumulative exposure of 13.9%, leaving 1.2% dormant/churned.

• **Attention vs Adoption Asymmetry:** Attention ratio stood at 5.03x, indicating discourse salience exceeded behavioral commitment.

• **Cross-Model Stability:** Dual-model alignment measured 57.7%, while archetype stances showed diverging_polarizing dynamics across rounds.

• **Speculative Amplification Risk:** Amplification warnings triggered in iteration(s): 1.

• **Scenario Implication (Hypothesis):** Should external media salience remain sustained while skepticism fails to dampen unverified narratives, high attention spikes can precede localized subculture polarization even when mainstream active adoption plateaus.

9. Limitations & Methodological Scope

Dimension	Methodological Constraint / Disclosure
Synthetic vs Empirical Data	Micro metrics (stance, virality, emotion, LLM credibility) are synthetic structured language-model estimates, NOT human survey or empirical social telemetry. Macro curves are deterministic ODE approximations.

Dimension	Methodological Constraint / Disclosure
Mean-Field Bass Assumptions	Mean-field modified Bass differential equation assuming homogeneous sub-segment mixing; parameters p and q are derived from synthetic Micro/Meso states and represent model sensitivity projections rather than empirical certainty.
Unverified Claims & Hallucination Control	Although prompts anchor evidence_status and feedback blocks carry verified anchors forward, LLMs can still misclassify edge nuances; all interpretations carry explicit uncertainty scores [0..1].
Missing / Failed Data	Failed slots recorded: 0 of 30. Failed slots contribute zero transmission weight and are never filled by another model or mock generator.
Evaluation Boundary	No external ground-truth observation array is persisted inside single simulation runs; empirical MAE/RMSE calibration requires held-out ground truth via /api/simulations/evaluate.

10. Technical Appendix

Appendix A: Complete Per-Iteration Micro Outputs

Iter	Archetype	Slot / Model	Status	S / V / C / E	Narrative Summary
1	Institutional Analyst	model_a (qwen3.5:4b)	success / inferred	+0.35/0.85/0.40/0.60	While the personal conduct of Jensen Huang is acknowledged and under review, the core allegation of espionage remains an intelligence assessment rather than independently verified fact, necessitating a distinction between confirmed personnel issues and unproven national security claims.
1	Skeptic Debunker	model_a (qwen3.5:4b)	success / inferred	-0.40/0.85/0.60/0.70	While the personal admission of an affair is corroborated, the allegation of espionage relies on classified intelligence assessments that have not been independently verified by public evidence.
1	Pattern Seeker	model_a (qwen3.5:4b)	success / supported	+0.30/0.90/0.50/0.60	A high-profile personal scandal involving NVIDIA's CEO has escalated into a national security inquiry due to US intelligence assessments linking the affair partner to Chinese intelligence activities.
1	Doomer	model_a (qwen3.5:4b)	success / unsupported	+0.70/0.90/0.40/0.80	The convergence of a high-profile corporate scandal involving a key US tech executive and unverified intelligence allegations about espionage creates a volatile scenario where personal misconduct could be weaponized into a national security crisis.
1	Amplifier Influencer	model_a (qwen3.5:4b)	success / supported	+0.60/0.95/0.70/0.85	A high-profile personal scandal involving a tech titan has triggered a federal investigation and raised serious questions about national security risks in the US-China semiconductor rivalry.
1	Institutional Analyst	model_b (gemma3:4b)	success / inferred	+0.40/0.60/0.60/0.30	The emergence of this situation presents a complex challenge, primarily centered around the acknowledged affair and the subsequent intelligence assessment. Further investigation and corroboration are required to determine the extent of any potential compromise of sensitive information or national security interests.
1	Skeptic Debunker	model_b (gemma3:4b)	success / inferred	+0.30/0.60/0.60/0.40	Initial reporting indicates a confirmed affair involving NVIDIA CEO Jensen Huang, alongside allegations from US intelligence regarding potential information gathering for China. The situation’s sensitivity due to NVIDIA’s strategic importance and US-China tech relations warrants careful observation.
1	Pattern Seeker	model_b (gemma3:4b)	success / inferred	+0.40/0.60/0.60/0.30	A reported affair involving NVIDIA’s CEO and an alleged connection to Chinese intelligence has triggered scrutiny regarding NVIDIA’s operations and US-China technology relations, presenting potential risks and reputational challenges.
1	Doomer	model_b (gemma3:4b)	success / inferred	-0.60/0.60/0.50/0.80	This event, framed by existing geopolitical pressures, presents a scenario where a seemingly private affair could be leveraged to create a cascade of negative consequences for NVIDIA, intensifying the already fraught relationship between the US and China. The inherent opacity of intelligence assessments and the potential for misinterpretation amplify the risk.
1	Amplifier Influencer	model_b (gemma3:4b)	success / inferred	+0.60/0.80/0.60/0.70	A complex situation is unfolding involving a personal relationship, potential intelligence activity, and the strategic importance of NVIDIA, demanding careful monitoring and analysis.

Iter	Archetype	Slot / Model	Status	S / V / C / E	Narrative Summary
2	Institutional Analyst	model_a (qwen3.5:4b)	success / inferred	-0.40/0.72/0.55/0.68	While an FBI investigation and intelligence assessments have been reported, the distinction between a personal scandal and confirmed national security espionage remains unproven.
2	Skeptic Debunker	model_a (qwen3.5:4b)	success / inferred	-0.40/0.72/0.55/0.68	While a federal investigation and intelligence assessment are reported facts, the specific allegation of espionage or technology transfer remains unverified speculation subject to ongoing inquiry.
2	Pattern Seeker	model_a (qwen3.5:4b)	success / inferred	+0.45/0.72/0.65/0.55	A high-profile personal scandal involving a tech titan has triggered a federal investigation and raised serious questions about national security risks in the US-China semiconductor rivalry.
2	Doomer	model_a (qwen3.5:4b)	success / inferred	+0.60/0.85/0.40/0.70	A high-profile personal scandal involving a tech titan has triggered a federal investigation and raised serious questions about national security risks in the US-China semiconductor rivalry.
2	Amplifier Influencer	model_a (qwen3.5:4b)	success / supported	+0.15/0.82/0.65/0.78	A high-profile personal scandal involving NVIDIA's CEO has triggered a federal investigation, with US intelligence alleging espionage ties to the woman involved in the affair.
2	Institutional Analyst	model_b (gemma3:4b)	success / supported	+0.30/0.48/0.80/0.40	The situation centers on an acknowledged affair involving NVIDIA CEO Jensen Huang, prompting a federal investigation and intelligence assessments regarding potential Chinese involvement. The situation’s sensitivity stems from NVIDIA’s strategic importance within the global AI landscape and ongoing US-China technological competition.
2	Skeptic Debunker	model_b (gemma3:4b)	success / inferred	+0.35/0.65/0.60/0.40	A situation involving an alleged affair and intelligence concerns has prompted a preliminary FBI investigation and triggered media attention due to NVIDIA’s strategic importance. The core facts, as reported by the Associated Press, remain limited to acknowledged admissions and speculative intelligence assessments.
2	Pattern Seeker	model_b (gemma3:4b)	success / supported	+0.30/0.70/0.80/0.60	A reported affair between NVIDIA CEO Jensen Huang and a woman linked to Chinese intelligence has prompted a federal investigation and heightened scrutiny of US-China technology relations, centering on NVIDIA’s strategic importance.
2	Doomer	model_b (gemma3:4b)	success / inferred	-0.65/0.70/0.60/0.80	This event represents a predictable escalation within the ongoing strategic competition between the US and China, leveraging personal indiscretions to probe vulnerabilities in critical technological sectors. The institutional response, while initiated, likely reflects a delayed and ultimately insufficient reckoning with systemic dependencies.
2	Amplifier Influencer	model_b (gemma3:4b)	success / supported	+0.75/0.75/0.85/0.80	The situation centers on a confirmed affair involving NVIDIA CEO Jensen Huang, prompting a federal inquiry and intelligence agency scrutiny, highlighting the sensitive US-China technology competition.
3	Institutional Analyst	model_a (qwen3.5:4b)	success / inferred	-0.30/0.85/0.40/0.60	While a personal scandal involving Jensen Huang is confirmed and under federal review, the specific allegation of espionage remains an unverified intelligence assessment rather than independently proven fact.

Appendix C: Mathematical Model Specification

1. Evidence Credibility & Transmission Weight: C_eff = clip(C_llm * penalty(evidence) * (1 - 0.35*uncertainty), 0, 1); T_i = (0.20 + 0.80*|stance|) * (0.40*virality + 0.35*C_eff + 0.25*emotional_charge) * ground_factor

2. Meso Instantaneous Node Activation: A_node(t) = clip(sum_j(w_j->node * T_j) / Z_node, 0.0, 1.0); Raw Inflow = sum_j(w_j->node * T_j) preserved independently

3. Effective Spread Potential: Spread = alpha * External_Influence + (1 - alpha) * Internal_Contagion

4. Modified Bass Diffusion: dN/dt = (p + q * (N/M)) * (M - N); N(t+1) = min(M, N(t) + dN/dt); A(t+1) = clip(A(t) + dN/dt - c * A(t), 0, N(t+1))

```
5. Model Agreement & Convergence: Agreement = 0.70 * mean(1 - |S_A - S_B|/2) + 0.30 * Jaccard(tags+claims);
Convergence = 1 - Var(stance_K)/Var(stance_1) if Var_K <= Var_1 else 0
```
